

# Calculation Policy

## **St Cuthbert's Mission Statement**

God made us all unique

To learn, live and grow

To show care, concern and friendship

To be the best we can

Showing Christ's love in all we do.

# Maths Calculation Policy

The following Calculation Policy has been largely adapted from the *White Rose Maths Hub* Calculation Policy and meets requirements of the National Curriculum 2014 for the teaching and learning of mathematics, in accordance with an increased emphasis on fluency and mastery of concepts. It is designed to provide pupils with a clear and smooth progression of learning through KS1 and KS2 and ensure that the teaching of calculation methods remains consistent across the 4 operations of addition, subtraction, multiplication and division. The consistent use of the CPA (concrete, pictorial, abstract) approach helps children develop mastery across all the operations in an efficient and reliable way. This policy shows how these methods develop children's confidence in their understanding of both written and mental methods. The school calculation policy builds progressively from the content and methods established in EYFS, with a recognition that concrete and pictorial representations of problems continue to play a valuable role throughout all key stages.

## **Age-stage expectations**

The calculation policy is organised according to age-stage expectations as set out in the National Curriculum (2014); however, we recognise that pupils need to be taught at an appropriate level 'based on the security of pupil's understanding and their readiness to progress to the next stage' (National Curriculum). This 'readiness to progress' is a clear focus at this challenging time and there will be a clear emphasis on recapping and reviewing methods from previous years where needed.

## **Context for calculation**

It is crucial that children are given real-life contexts and problems in which to use and apply their calculation methods. Children subsequently develop a more secure understanding of the purpose of calculations and learn to choose their operations with accuracy. This is a priority in an increasingly-challenging curriculum, with its focus on mastery.

## **Choosing a calculation method**

Children must be taught and encouraged to use a simple process in deciding what approach to take to a calculation, ensuring that they select the most appropriate method for the problem, whether mental or written. Children need to be comfortable with a wide variety of strategies and representations in order to demonstrate this.

## KEY STAGE 1

Children develop the core ideas that underpin all calculation. They begin by connecting calculation with counting on and counting back, but they should learn that understanding wholes and parts will enable them to calculate efficiently and accurately, and with greater flexibility. They learn how to use an understanding of 10s and 1s to develop their calculation strategies, especially in addition and subtraction.

**Key language:** whole, part, ones, ten, tens, number bond, add, addition, plus, total, sum, altogether, subtract, subtraction, find the difference, take away, minus, less, fewer, more, group, share, equal, equals, is equal to, is the same as, groups, equal groups, double, times, multiply, multiplied by, divide, divided by, share, group, shared equally, half, times-table

## KEY STAGE 2

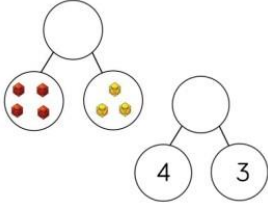

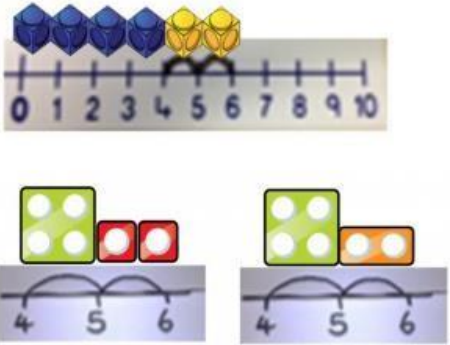

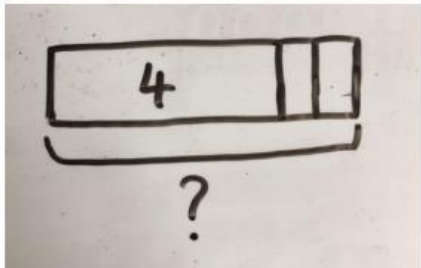

In Years 3 and 4, children develop the basis of written methods by building their skills alongside a deep understanding of place value. They should use known addition/subtraction and multiplication/division facts to calculate efficiently and accurately, rather than relying on counting. Children use place value equipment to support their understanding, but not as a substitute for thinking.

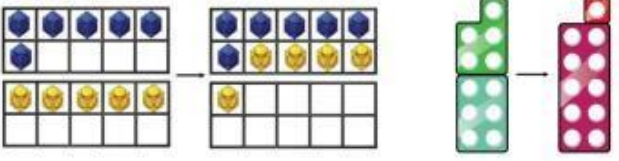

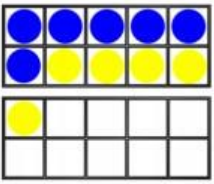

**Key language:** partition, place value, tens, hundreds, thousands, column method, whole, part, decrease, equal groups, the product of, sharing, grouping, bar model

In upper Key Stage 2, children build on secure foundations in calculation, and develop fluency, accuracy and flexibility in their approach to the four operations. They work with whole numbers and adapt their skills to work with decimals, and they continue to develop their ability to select appropriate, accurate and efficient operations.

**Key language:** decimal, column methods, exchange, partition, mental method, ten thousand, hundred thousand, million, factor, multiple, prime number, square number, cube number

**Year 1 Addition**

Objective and Strategy	Concrete	Pictorial	Abstract
<p><b>Combining two parts to make a whole:</b> understanding the part-whole model</p>	 <p>Use part-part-whole model; use cubes to add two numbers together, as a group or in a bar. Other resources can be used: teddy bears, shells, people, toy cars!</p> <p><i>The parts are 4 and 3. The whole is 7.</i></p>	 <p>Children draw to represent the parts and understand the relationship with the whole.</p> <p><i>The parts are 4 and 3. The whole is 7.</i></p>	<p><math>4 + 3 = 7</math></p> <p><i>4 is a part, 3 is a part and the whole is 7.</i></p>
<p>Starting at the bigger number and <b>counting on</b> using number lines (using cubes or Numicon to help)</p>	 <p>Start with the larger number and count on one by one. Bead strings can also be used.</p>	 <p>A bar model to encourage children to count on rather than count all.</p> <p>Children may also draw a number line and count on in ones or in one jump.</p>	<p><math>4 + 2 = 6</math></p> <p>Children place the larger number in their head and count on the smaller number to find the answer.</p> <p>They may also think of the number line as an abstract idea - what is 2 more than 4? What is the sum of 2 and 4? What is the total of 4 and 2?</p>

<p><b>Regrouping to make 10</b>, using ten frames, counters, cubes and Numicon</p>	<p>6 + 5</p> 		<p><math>6 + 5 = 11</math></p> <p>Children start to understand the idea of equality:</p> <p><math>6 + \blacksquare = 11</math></p>
<p><i>Adding 1 and 2 digit numbers to 20</i></p>		<p>Children draw the ten frame and counters / cubes. They may also partition the smaller number using the part-part-whole model to make 10</p>	<p><math>6 + 5 = 5 + \blacksquare</math></p>

## Year 2 Addition

Adding three 1digit numbers

Children should look for number bonds to 10, or doubles, to add more efficiently.

Children may draw a part-whole model or bar models to help.

$$7 + 6 + 3 = 16$$

$$7 + 6 + 3 = 16$$

Adding a 2-digit number and ones

- not crossing 10

TO + O using base 10. Continue to develop understanding of partitioning and place value.  
41 + 8

Practical apparatus used to find the number bond to 10

- crossing 10

Children to represent the base 10 e.g. lines for tens and dot/crosses for ones.

Children encouraged to count on from the larger number, crossing 10

$$41 + 8$$

$$1 + 8 = 9$$

$$40 + 9 = 49$$

Children can also use their number bonds to 10 to help:

$$38 + 5 = 43$$

$$8 + 5 = 13, \text{ so } 38 + 5 = 43$$

Adding two  
2digit numbers

- not  
crossing  
10
- crossing  
10

Children begin by adding 2-digit numbers with no exchange, using practical manipulatives to consolidate understanding alongside written methods. They then explore exchange

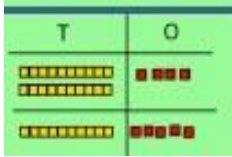

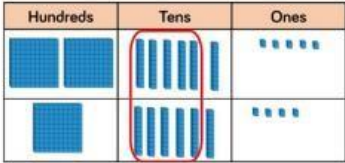

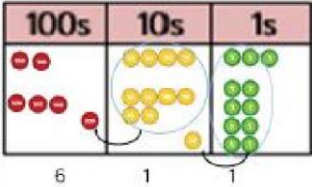

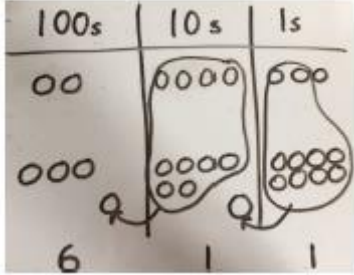

Children can represent Base 10 or place value counters in a place value chart (see left) or continue to use number lines, jumping to multiples of 10 to be more efficient

$$38 + 23 = 61$$

Years 3 - 6 Addition

<p>Adding numbers with up to 3 digits - no exchange</p> <p>Year 3</p>	<p>Use Base 10 to solve practically, adding the ones first then the tens</p>  <p>Place value counters and grids will also be used (see below) with no regrouping (exchange)</p>	<p>Children may draw counters using a place value grid</p>	<p>They will use a written column method, adding the ones first, then the tens, then the hundreds</p> $\begin{array}{r} 223 \\ + 114 \\ \hline 337 \end{array}$
<p>Adding numbers with up to 3 digits - with exchange</p> <p>Year 3</p> <p>We will start with exchange into 1 column, before moving onto exchanges in more than 1 column</p>	<p>We will use Base 10</p> <p>265 + 164</p>  <p>Use of place value counters to add HTO + TO, HTO + HTO etc. When there are 10 ones in the 1s column- we exchange for 1 ten, when there are 10 tens in the 10s column- we exchange for 1 hundred.</p> 	<p>Children can represent the counters in a place value chart, showing where they need to exchange:</p> 	<p>Column method used: start with the ones first, then the tens, then the hundreds</p> $\begin{array}{r} 243 \\ +368 \\ \hline 611 \\ 11 \end{array}$

Adding numbers with up to 4 digits

Year 4

Children will continue to use practical methods to add larger numbers - place value grids or Base 10. They will exchange 10 ones for a ten, 10 tens for a hundred and 10 hundreds for a thousand

Children can represent addition in a place value grid, using coloured circles to show the exchanges

Children continue to use a formal written method of column addition

$$\begin{array}{r}
 1378 \\
 + 2148 \\
 \hline
 3526 \\
 11
 \end{array}$$

Adding numbers with more than 4 digits

Year 5

Adding decimals, including money (3 decimal places)

Children use place value grids or Base 10 to consolidate understanding, using larger numbers

Decimal place value counters introduced to help with exchange

Children may draw representations on a place value grid

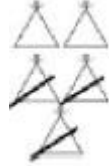

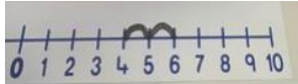

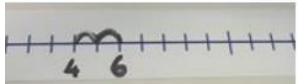

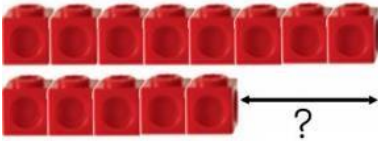

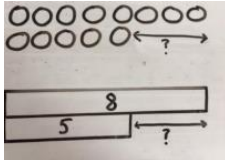

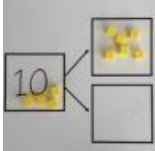

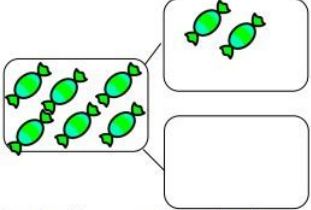

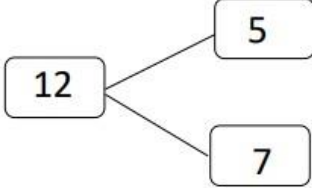

Children use column methods accurately (relate decimals to money and measures)

$$\begin{array}{r}
 19.01 \\
 3.65 \\
 + 0.70 \\
 \hline
 23.36
 \end{array}$$

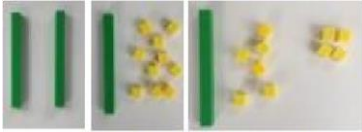

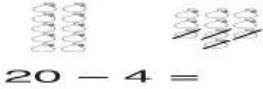

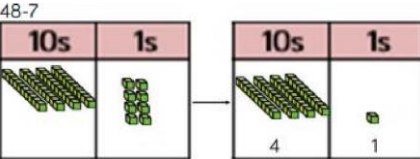

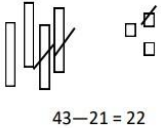

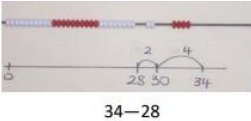

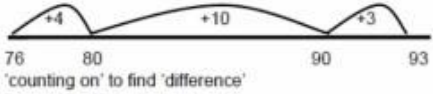

<p>Adding several numbers of increasing complexity</p> <p>Year 6</p> <p>Adding money and measures with different numbers of decimal places</p>	<p>As Year 5, using place value counters to add decimals</p>	<p>As Year 5</p>	$  \begin{array}{r}  23.361 \\  9.080 \\  59.770 \\  + 21.300 \\  \hline  93.511  \end{array}  $ <p>Empty decimal places can be filled with zero to show the place value in each column.</p> $  \begin{array}{r}  81059 \\  3668 \\  15301 \\  + 20511 \\  \hline  120539  \end{array}  $
--	--	------------------	---

## Year 1 Subtraction

Objective and Strategy	Concrete	Pictorial	Abstract
<p><b>Taking away ones</b> (starting within 10 and moving onto 20)</p>	<p>Use practical apparatus (counters, cubes, toys) to show how objects can be taken away</p>  <p style="text-align: center;"><math>4 - 2 = 2</math></p>	<p>Crossing out drawn objects to show what has been taken away</p>  <p style="text-align: center;"><math>5 - 3 = 2</math></p>	<p><math>7 - 4 = 3</math></p> <p><math>9 - 5 = 4</math></p> <p><math>9 - ? = 4</math></p> <p><math>? - 5 = 4</math></p>
<p><b>Counting back</b></p>	<p>Move objects away from the group, counting backwards</p>  <p>Moving beads along the string, counting backwards</p> 	<p>Count back in ones using a number line or a number track</p> <p><math>6 - 2 = 4</math></p> 	<p>Put 6 in your head and count back 2. What number are you at? Children can represent this on an empty number line if needed</p>  

<p><b>Finding the difference</b></p>	<p>Compare physical objects and quantities (display them carefully so they represent a bar model)</p> <p>Calculate the difference between 8 and 5.</p> 	<p>Count on using a number line to find the difference; they can also draw cubes or other concrete objects to show what they need to calculate</p> 	<p>Find the difference between 8 and 5.</p> <p>8 - 5, the difference is <span style="background-color: purple; color: black;">    </span></p> <p>Children to explore why</p> <p>9 - 6 =</p> <p>8 - 5 =</p> <p>7 - 4 have the same difference</p>
<p><b>Part-part-whole model</b></p> <p><i>Represent and use number bonds and related subtraction facts within 20</i></p>	<p>Use part-part-whole models to show the link to addition (the inverse) with practical equipment</p>  <p>If 10 is the whole and 6 is one of the parts, what is the other part?</p> <p>Use coloured cubes e.g. 3 red and 7 blue - swap sides and subtract one group</p>	<p>Draw the part-part-whole models pictorially</p> 	<p>Move to using numbers within part-part-whole models</p> 

**Year 2 Subtraction**

<p><b>Regroup a ten into 10 ones</b></p> <p><i>Regrouping = exchange</i></p>	<p>Use Base 10 to show practically that we can exchange a 10 for 10 ones</p> 	<p>Show the exchange of a 10 for 10 ones in pictures</p> 	<p>Written calculation</p> $20 - 4 = 16$
<p><b>Partitioning to subtract (without exchange)</b></p> <p><i>Regrouping = exchanging tens for ones</i></p>	<p>Use Base 10 to show how to partition the number when subtracting without exchange</p> 	<p>Children draw representations of Base 10 and show the subtraction by crossing off</p> 	<p>Written calculation</p> $43 - 21 = 22$
<p><b>Make 10</b></p>	<p>Children count on to the next 10 and the rest using practical equipment</p> 	<p>Use a number line to count onto next 10 and the rest</p> 	<p>Written calculation</p> $93 - 76 = 17$

### Years 3 - 6 Subtraction

Column method with exchange (up to 3-digit numbers)

**Year 3**

*Further practice of 3-digit subtraction with no exchange*

Use Base 10 and show the exchange practically; this can also be shown with place value counters (see below)

Represent the Base 10 or place value counters pictorially, showing the exchange

Formal written method of column subtraction

$$\begin{array}{r}
 \phantom{0}^3 \phantom{0}^1 \\
 435 \\
 - 273 \\
 \hline
 262
 \end{array}$$

Column method with exchange (up to 4-digit numbers)

Year 4

Introduce decimal subtraction in the context of money

Represent place value counters pictorially, showing the exchange

Formal column method - children need to understand what has happened when they cross out digits (exchange)

$$\begin{array}{r} \phantom{0}^3 \phantom{0}^1 \\ 4357 \\ - 2735 \\ \hline 1622 \end{array}$$

Column method with exchange (more than 4-digit numbers)

Years 5 / 6

See above - practical equipment still useful to consolidate understanding of exchange

See above

Formal column method (extend understanding of 0s for place holders)

$$\begin{array}{r} \cancel{2} \cancel{1} \cancel{0} \cancel{8} \cancel{6} \\ - \phantom{0} \phantom{0} 2 \phantom{0} 1 \phantom{0} 2 \phantom{0} 8 \\ \hline 2 \phantom{0} 8, \phantom{0} 9 \phantom{0} 2 \phantom{0} 8 \end{array}$$

Column method to subtract numbers with up to 3 decimal places (same number of decimal places)

Year 5

Place value counters to represent decimals

Children draw or represent counters on a place value grid that includes decimals

Formal column method, aligning decimal point accurately

$$\begin{array}{r} 4 \text{ } 1 \\ 5.43 \\ - 2.7 \\ \hline 2.73 \end{array}$$

Column method to subtract larger numbers; decimals (different number of decimal places)

Year 6

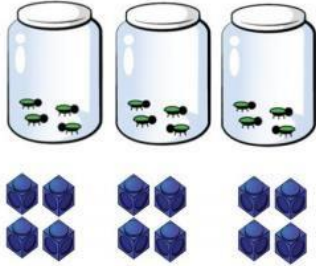

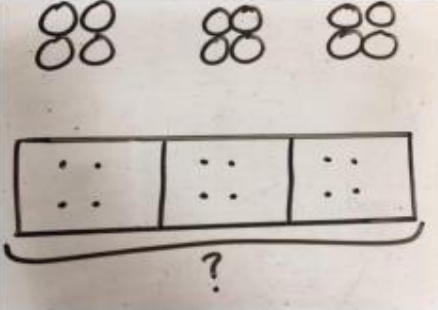

See above - practical equipment still used where needed to give clarity

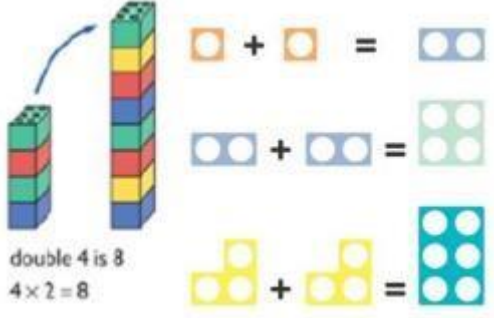

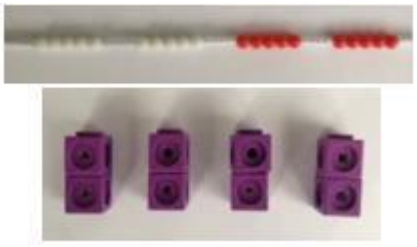

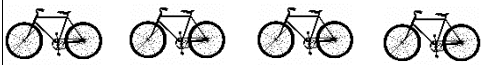

See above

$$\begin{array}{r} \cancel{7} \cancel{8} \cancel{0}, 699 \\ - 89,949 \\ \hline 60,750 \end{array}$$

$$\begin{array}{r} \cancel{7} \cancel{0} 5 \cdot \cancel{4} 19 \text{ kg} \\ - 36 \cdot 080 \text{ kg} \\ \hline 69 \cdot 339 \text{ kg} \end{array}$$

**Year 1 Multiplication**

Objective and Strategy	Concrete	Pictorial	Abstract
<p><b>Recognising and making equal groups;</b> <b>repeated addition</b></p>	<p>Use cubes, Numicon and other objects in the classroom <math>3 \times 4</math> <math>4 + 4 + 4</math></p> <p>There are 3 equal groups, with 4 in each group.</p>  <p>The concrete representation shows three identical groups. Each group consists of a glass jar containing four ants, and a small 2x2 grid of four blue cubes.</p>	<p>Represent practical resources in a picture and use a bar model</p>  <p>The pictorial representation shows three groups of four circles arranged in a 2x2 grid. Below this is a bar model with three equal sections, each containing four dots. A bracket underneath the entire bar model is followed by a question mark.</p>	<p><math>3 \times 4 = 12</math></p> <p><math>4 + 4 + 4 = 12</math></p>

<p><b>Doubling</b></p>	<p>Use cubes, Numicon and other objects in the classroom</p>  <p>double 4 is 8  <math>4 \times 2 = 8</math></p>	<p>Draw pictures to show how to double numbers</p> <p>Double 4 is 8</p> 	<p><math>4 \times 2 = 8</math></p>
<p><b>Counting in multiples</b></p>	<p>Use cubes, Numicon and other objects in the classroom</p> 	<p>Draw representations to show counting in multiples</p> <p>E.g. 4 bikes, how many wheels?</p> 	<p><math>2 \times 4 = 8</math></p>

## Year 2 Multiplication

**Arrays** - showing commutative multiplication

Objects can be laid out in arrays to find 2 lots of 5 (and 5 lots of 2) for example. Physical objects can also be used to create arrays (cubes)

Children draw their own arrays to show understanding

$$5 \times 4 = 20$$

$$4 \times 5 = 20$$

$$20 = 4 \times 5$$

$$5 + 5 + 5 + 5$$

Children can use the arrays to write multiplication sentences reinforcing repeated addition

**Using the inverse relationship**

Children will use practical objects to explore the relationship between multiplication and division

$$2 \times 4 = 8$$

$$4 \times 2 = 8$$

$$8 \div 2 = 4$$

$$8 \div 4 = 2$$

$$8 = 2 \times 4$$

$$8 = 4 \times 2$$

$$2 = 8 \div 4$$

$$4 = 8 \div 2$$

Show all 8 related fact family sentences.

## Years 3 - 6 Multiplication

Column multiplication (2-digit x 1-digit numbers)

Year 3

Children use place value counters and Base 10 to multiply practically

Grid method may be drawn to help with understanding

	H	T	O	
		3	4	
x			5	
		2	0	(5 × 4)
+	1	5	0	(5 × 30)
	1	7	0	

	H	T	O	
		3	4	
x			5	
	1	7	0	
	1	2		

Children use understanding of practical methods to develop confidence with written methods of short multiplication (column multiplication) - expanded method sometimes used first

Column multiplication  
(2 and 3-digit numbers multiplied by 1-digit)

Year 4

Children use place value counters and Base 10 to multiply practically, moving onto larger numbers and making sure they are always multiplying the ones first

Children may continue to draw representations of Base 10 and place value counters but are encouraged to move towards the short, formal written method (see right)

	H	T	O
	2	4	5
×			4
<hr/>			
	9	8	0
	1	2	

Column multiplication  
(up to 4-digit  
numbers multiplied by 1-digit  
numbers)

Year 5

See above (practical methods used as revision  
and where needed)

$$1,826 \times 3 = 5,478$$

See above

Written method

	Th	H	T	O
	1	8	2	6
$\times$				3
	5	4	7	8
	2		1	

Column multiplication  
(2-digit numbers  
multiplied by 2-digit  
numbers)

Year 5

Children use place value counters and Base 10 to multiply practically, moving to the abstract method

See above

Written method (grid method may be used  
as an initial method before moving onto the  
formal, written method)

×	20	2
30	600	60
1	20	2

	H	T	O
		2	2
×		3	1
		2	2
	6	6	0
	6	8	2

Column multiplication  
(3-digit numbers  
multiplied by 2-digit  
numbers)

Year 5

Children use place value counters and Base 10 to  
consolidate understanding

See above

Children look at links to the grid method  
but move quickly onto the formal, written  
method of column multiplication

x	200	30	4
30	6,000	900	120
2	400	60	8

	Th	H	T	O
		2	3	4
x			3	2
		4	6	8
<sup>1</sup> 7	<sup>1</sup> 0	2	0	
7	4	8	8	

Column multiplication (multi-digit up to 4 digits multiplied by a 2-digit number)

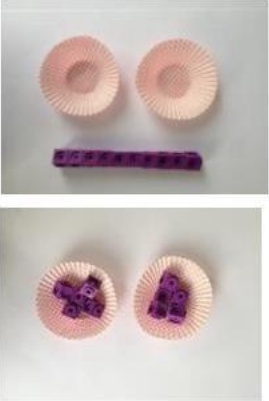

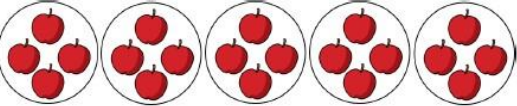

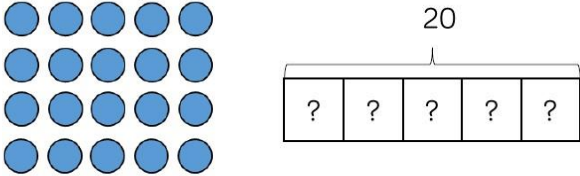

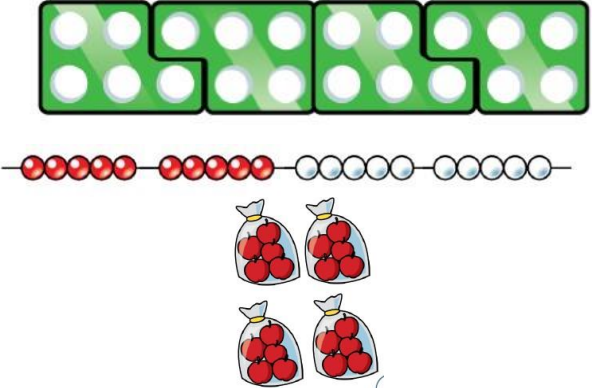

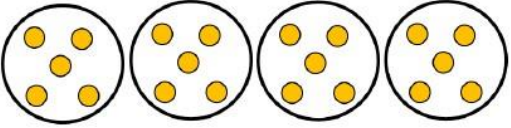

Year 6

Decimals (up to 2 decimal places by a single digit) can also be multiplied using the written method

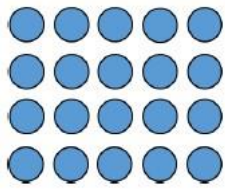

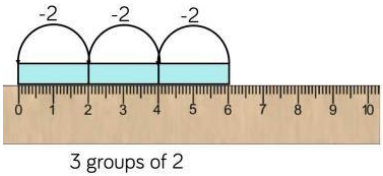

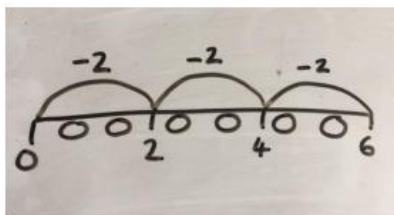

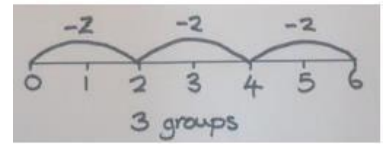

Children should now be confident with the formal, written method of column multiplication. Practical equipment can be used to consolidate understanding. If children are still struggling with times tables, multiplication grids can be used as support so they can concentrate on the method

TTh	Th	H	T	O
	2	7	3	9
x			2	8
2	1	9	1	2
<sub>2</sub>	<sub>5</sub>	<sub>3</sub>	<sub>7</sub>	
5	4	7	8	0
<sub>1</sub>		<sub>1</sub>		
7	6	6	9	2

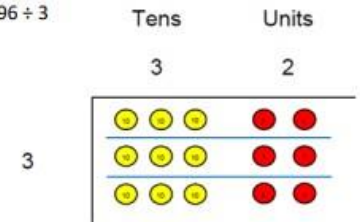

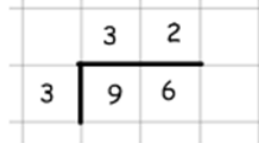

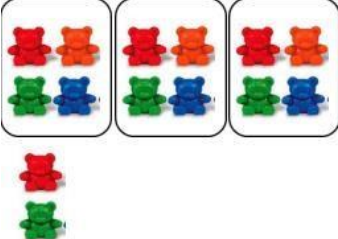

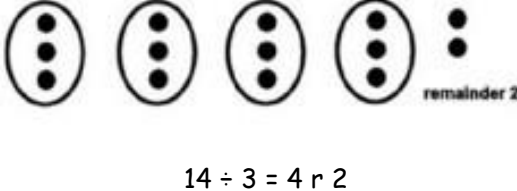

$$\begin{array}{r} 3.19 \\ \times 8 \\ \hline 25.52 \end{array}$$

<b>Year 1 Division</b>			
<b>Objective and Strategy</b>	<b>Concrete</b>	<b>Pictorial</b>	<b>Abstract</b>
<p><b>Sharing objects into groups</b></p>	<p>Use cubes and other objects in the classroom</p> 	<p>Children use pictures or shapes to share amounts into equal groups.</p>  <p>They may also use arrays or bar models as different pictorial representations</p> 	<p><math>15 \div 3 = 5</math></p>
<p><b>Division as grouping</b></p> <p><i>eg. I have 20 apples and put them in groups of 5. How many groups do I have?</i></p>	<p>Use cubes and other practical manipulatives to group objects</p> 	<p>Draw pictures to show groupings</p> 	<p><math>20 \div 5 = 4</math></p>

## Year 2 Division

<p><b>Division within arrays</b> (links to multiplication)</p>	<p>Children link division to multiplication by making arrays practically and creating number sentences</p> <p> <math>15 \div 5 = 3</math>  <math>15 \div 3 = 5</math>  <math>3 \times 5 = 15</math>  <math>5 \times 3 = 15</math> </p> 	<p>Children draw arrays and use lines to split them into groups, making multiplication and division sentences</p> 	<p>Children create division and multiplication families</p> <p> <math>4 \times 5 = 20</math>  <math>5 \times 4 = 20</math>  <math>20 \div 4 = 5</math>  <math>20 \div 5 = 4</math> </p>
<p><b>Repeated subtraction</b></p>	<p>Children use practical objects to subtract groups from a number ('chunks' of 2 for example)</p> 	<p>Children represent repeated subtraction pictorially</p> 	<p>Children use an abstract number line to represent the equal groups that have been subtracted</p> 

**Years 3 - 6 Division**

<p>Division of 2digit numbers by a 1-digit number (no exchange; short division introduced as an efficient method) <b>Year 3</b></p>	<p>Children use Base 10 to start dividing larger numbers, partitioning into tens and ones. Place value counters will also be used to share numbers into equal groups</p> <p><math>96 \div 3</math></p> <table style="margin-left: auto; margin-right: auto;"> <tr> <td></td> <td style="text-align: center;">Tens</td> <td style="text-align: center;">Units</td> </tr> <tr> <td></td> <td style="text-align: center;">3</td> <td style="text-align: center;">2</td> </tr> </table> 		Tens	Units		3	2	<p>Children can represent the place value counters pictorially (see left)</p> <p>Children continue to recognise division as both sharing and grouping throughout KS2</p>	<p>Bus stop method (no exchange)</p> 
	Tens	Units							
	3	2							
<p><b>Division with a remainder</b> (times tables facts; repeated subtraction) <b>Year 3</b></p>	<p>Divide practical objects into groups and see how many are left over ('remainders'). Cubes, lollipop sticks etc can be used</p>  <p><math>14 \div 4 = 3 \text{ r } 2</math></p>	<p>Children draw pictures to show remainders when dividing</p>  <p><math>14 \div 3 = 4 \text{ r } 2</math></p>	<p>Children understand that not all numbers divide perfectly (links to times tables)</p> <p><math>12 \div 3 = 4</math> (no remainder) <math>13 \div 3 = 4 \text{ r } 1</math></p>						

Division of 2digit numbers by a 1-digit number (sharing with exchange)

Year 3

Children use Base 10 and then place value counters to exchange. Here, we are dividing 42 into 3 equal groups (or rows). We start with the tens; we can put 1 ten in each group and have 1 ten left over. We exchange this ten for 10 ones and then divide the ones equally between the 3 groups

$$42 \div 3 = 14$$

Children draw the place value counters to demonstrate understanding (supporting the practical method). Children can clearly see the equal groups

Children extend understanding of the bus stop method using exchange (showing understanding of remainders)

Short division  
(up to 3-digits  
by a 1-digit  
number)

Year 4

Children continue to use Base 10 and place value counters to share 3-digit numbers into equal groups. Start with the equipment outside the place value grid before sharing the hundreds, tens and ones equally between the rows. Exchange can also be used

$844 \div 4 = 211$   
*sharing*

$856 \div 4 =$   
 $214$   
*grouping*

Children draw the place value counters to demonstrate understanding (see left)

Children continue to use the bus stop method (with and without exchange)

		2	1	4
4	8	5	16	

Short division  
(up to 4-digits  
by a 1-digit  
number,  
including  
remainders)

Year 5

Place value counters can continue to be used to support understanding of division

$$8532 \div 2 = 4266$$

Children can draw their own counters and group them pictorially

Children use the short method of division with increasing confidence when dividing numbers with multiple exchanges

	4	2	6	6
2	8	5	13	12

Long division (multi-digits by a 2-digit number)

Year 6

When children begin to divide larger numbers, written methods become more efficient; concrete and pictorial methods are less effective (see right)

$$972 \div 36$$

Chunking

$$\begin{array}{r} 36 \overline{) 972} \\ - 360 \quad (10) \\ \hline 512 \\ - 360 \quad (10) \\ \hline 152 \\ - 180 \quad (8) \\ \hline 72 \\ - 72 \quad (2) \\ \hline 00 \end{array}$$

$$10 + 10 + 8 + 2 = 27$$

Useful list

$$\begin{array}{l} 1 \times 36 = 36 \\ 10 \times 36 = 360 \\ 100 \times 36 = 3600 \\ 5 \times 36 = 180 \\ 2 \times 36 = 72 \end{array}$$

Find out 'How many 36s are in 972?' by subtracting 'chunks' of 36, until zero is reached (or until there is a remainder). Teach pupils to write a 'useful list' first at the side that will help them decide what chunks to use.

Introduce the method in a simple way by limiting the choice of chunks to 'Can we use 10 lots? Can we use 100 lots? As children become confident with the process, encourage more efficient chunks to get to the answer more quickly (e.g. 20x, 5x), and expand on their 'useful' lists.

Long division (multi-digits by a 2-digit number) with remainders

Year 6

When a remainder is left at the end of a calculation, children can leave it as a remainder or convert it to a fraction, depending on the question. They may also need to round

$$372 \div 15 = 24 \text{ r}12$$

			2	4	r	1	2
1	5	3	7	2			
		-	3	0	0		
				7	2		
		-		6	0		
					1	2	

$$\begin{array}{l} 1 \times 15 = 15 \\ 2 \times 15 = 30 \\ 3 \times 15 = 45 \\ 4 \times 15 = 60 \\ 5 \times 15 = 75 \\ 10 \times 15 = 150 \end{array}$$

			2	4	$\frac{4}{5}$	
1	5	3	7	2		
		-	3	0	0	
				7	2	
		-		6	0	
					1	2

$$372 \div 15 = 24 \frac{4}{5}$$
